*Proposal Title (Not to exceed 60 characters)
Acquisition/Expansion of North Monroe Property

*Proposal Description
This project would acquire in fee simple land totaling 3.68 acres along Monroe Avenue N.W. in downtown Grand Rapids for the purpose of providing multi-use public recreation space and tiered, stepped-back flood control and mitigation along the Grand River. This site would directly connect to existing riverfront parks totaling approximately 8.5 acres, and eventually connect to larger riverfront parks and the White Pine Trail. Presently, the site offers views of the Grand River below the Sixth Street dam, a popular urban fishing spot. This is the area of the historic rapids, where the restored rapids are envisioned. The site will offer views and access to those restored rapids.

Project Justification and Support:
Rapid habitat is extremely rare in the lower peninsula of Michigan, comprising only 1% of river habitat. Historical documents indicate that, prior to urbanization in the 1800s, the Grand River at present-day Grand Rapids was strewn with granite boulders and cobble stones and the mile-long rapids were wild, their noise echoing from neighboring hills. However, the river has since been degraded by five low head dams, flood walls, urban encroachment, and channelization, including dredging, excavation and grading.

The 2011 Green Grand Rapids amendment to the Master Plan, which engaged 1,800 residents in 120 meetings, calls for increasing recreational opportunities on and adjacent to the river and a change in land use along the river from industry to open space and mixed use (p. 59-60, 78, 85, 88). Inspired by this vision, Grand Rapids Whitewater (GRWW) was established in 2010 as a grassroots nonprofit to restore the rapids and develop the river into a recreational destination. This project is conservatively estimated to stimulate a net new economic impact of $15 to $19 million per year (Anderson Economic Group, 2014). Today, this restoration project has the support of Mayor Heartwell and Governor Snyder, and earned the Urban Waters Federal Partnership (UWFP) designation. The City hopes to submit the Joint Permit application in 2015.

Grand Rapids has a scarcity of parks and recreation for the resident population. The city has only 7.88 acres per 1,000 people even including public school acreage (Pros Consulting, 2011). The Midwest benchmark is 12 to 15 acres (National Recreation and Parks Association, 2009). In line with Green Grand Rapids, the City has identified six parcels adjacent to the future, restored rapids for acquisition. This would enable development of the site to increase overall park acreage in the city, enlarge the existing linear riverfront park, and support activation of the river corridor where the restored rapids are envisioned. This park would ultimately connect to the White Pine Trail.

Green Grand Rapids also calls for park development to become models of sustainable design (p. 61). The current riverbank in this area is defined by a sheer floodwall that prevents direct river access. This floodwall will need to be heightened for flood control and mitigation purposes, further increasing the existing separation. However, the proposed acquisition would permit a different treatment by providing space to construct a tiered, stepped-back design that provides the necessary height while creating a multi-purpose space for recreation.

The Parks and Recreation Master Plan prioritizes river restoration and downtown riverwalk improvements (p. 80, 82, 95). The project aligns with SCORP’s Objectives No. 3, 4, and 6, and MNRTF’s priority for urban areas.

Project Description:
The City has embarked on an ambitious public planning process called GR Forward to discuss with the community what development in downtown, along the river banks and in the river itself should look like. This planning process will result in a formal Downtown Plan and a River Corridor Plan (dry banks). The Downtown Development Authority has appointed a 32-member Downtown Plan Steering Committee and the City Commission appointed a 72-member River Corridor Plan Steering Committee to oversee those aspects of the planning process and ensure that stakeholders are involved. The City also appointed a 23-member Grand River Restoration Steering Committee which assures coordination between the various planning efforts. Grand Rapids’ UWFP co-sponsors and other community partners sit on this committee. This planning process began about one year ago and is anticipated to wrap up in May or June 2015. The City Commission will be asked to adopt the final plan.
Stoss Inc. is the landscape subcontractor leading the River Corridor planning process (dry banks). To coordinate river and riverbank development, Stoss is collaborating with the engineer hired to design the restoration of the river. With input from the steering committees and the public, Stoss is developing conceptual plans for 15 sites along both sides of the Grand River, including the site of proposed acquisition. Although this concept plan is still being developed in response to feedback provided by the community, the City envisions active river access, spectator space for water events, active use space, gathering spaces, and other public uses.

The site itself is in downtown Grand Rapids one block from City Hall. It is surrounded by commercial/residential mixed-use development. It has access to public utilities, sidewalks, trails, and public transportation. The topography is generally level and the site has 659 linear feet of road frontage. It has very good access and visibility.

The timeframe to complete development cannot yet be determined. It will depend on sequencing of flood control and mitigation activities in downtown and funding. Planning for flood mitigation is still ongoing and a cost estimate for this space will not be available until after the River Corridor plans are complete.

*III. Natural Resource Access and Protection:
Natural resources currently on the site include grass and trees. There is a good view of the Grand River and the Sixth Street dam where anglers congregate. Below the dam is a good fishing spot, especially for steelhead and salmon. In fact, Field & Stream ranked Grand Rapids number six in the nation for urban fishing.

Unfortunately, the dam is also a barrier to native species. The draft Grand River Fisheries Assessment, complied by the Michigan Department of Natural Resources in 2011, states this dam is "a barrier to the movement of several Lake Michigan fish species that ascend the river to spawn. Although the [fish]ladder provides upstream passage for coho salmon, Chinook salmon and steelhead, other migratory species (i.e. lake sturgeon, walleye, longnose sucker, redhorse) do not successfully pass upstream through the ladder. Failure to reach upstream spawning areas limits the productivity of these populations." Both lake sturgeon and river redhorse are on the State’s list of threatened and endangered species. In addition, federally-endangered snuffbox mussels have been found in the downtown reach of the river. The Grand River Restoration Project will improve habitat for these species, as well as provide recreational opportunities.

The site proposed for acquisition is next to the area of the historic rapids, where the restored rapids are envisioned. After restoration, the site will provide views and access to these regionally rare rapids. Fishing, kayaking, and winter sports are proposed in the draft conceptual plan as well as green space, play space, landscaping and wetlands. Acquisition of this property will support the restoration project, including its environmental benefits.

*IV. Other Information:
All location maps, site development plans, boundary maps, and other graphic information must be clear, legible, detailed, and appropriately labeled. Grants Management staff use these materials to help evaluate your application and to find and evaluate many of the sites. We must also photocopy many of the graphic materials in black-and-white; be sure that what you submit will photocopy legibly. **Please do not submit aerial photographs for location maps, site development plans, or boundary maps.**

<tr>
<td>Acquisition of this land could provide direct and full access to the river for recreation while improving flood control and mitigation. The current riverbank in this area is defined by a short floodwall that prevents direct access. This wall needs to be heightened for flood control and mitigation purposes, further increasing the separation. The proposed acquisition would permit a different treatment by providing space to construct a tiered, stepped-back design that provides the necessary height while creating a multi-purpose space for recreation. We envision active river access, gathering spaces, active use space, spectator space for water events and other public uses. This acquisition would increase overall park acreage in the city, enlarge the existing riverfront linear park, and support activation of the river corridor where the restored rapids are envisioned. The alternative to acquisition is private development. Acquisition will preserve this riverfront space for public recreation in perpetuity and create a view shed that will provide additional opportunities for development and redevelopment with more overall value and density in the adjacent Monroe North area.</td>

City of Grand Rapids
North Monroe Property Acquisition Boundary Map
Before the river was changed by the work of man, the rapids had a nearly uniform descent for about a mile... sufficient to give a decided turbulent and wild... A Whittemore, Kent Scientific Institute of Grand Rapids, 1895

Compare it with the rapids at Sault Ste. Marie.

--1913 Grand Rapids Progress

1868

"Here is plenty of fish and plenty of game, and the greatest country for honey that I ever saw."

"There was that spring an unprecedented catch upon the rapids, of sturgeon, pickerel, bass, suckers, and other members of the finny tribe."

"The rapids provide the best clamming in the state."

--Accounts of early pioneers
